

AZMAT ULLAH KHAN

Senior Software Developer | Full Stack Engineer | React.js, Next.js & TypeScript Specialist

azmatkhan0470727@gmail.com | +92 315-0470727 | linkedin.com/in/azmat-ullah-khan-289439237 | github.com/Azmat7860

PROFESSIONAL SUMMARY

Results-driven **Full Stack Developer** with **3+ years** of professional experience engineering scalable, production-grade web applications across healthcare, AI SaaS, and enterprise domains. Currently serving as **Senior Software Developer** at **Tech Crusades**, leading development of analytics platforms, AI-powered dashboards, and enterprise-grade role-based applications. Proficient in React.js, Next.js, TypeScript, Node.js, and NestJS, with deep expertise in complex UI architecture, data visualization (Recharts, TanStack Table), OpenAI API integration, and secure authentication (AWS Amplify Cognito, JWT). Adept at delivering high-quality solutions within Agile environments and collaborating across disciplines to ship performant, maintainable products that drive real business value.

TECHNICAL SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, HTML5, CSS3, Tailwind CSS, shadcn/ui

Backend: Node.js, NestJS, Express.js, REST APIs, Authentication & Authorization, JWT, WebSockets, RBAC

Databases: MongoDB, PostgreSQL, Supabase, MySQL, TypeORM, Mongoose ODM

Cloud & DevOps: AWS Amplify (Cognito), Git, GitHub, CI/CD (Basic), Docker (Basic), Linux/Bash

Tools & Technologies: OpenAI APIs, TanStack Table, Recharts, ExcelJS, Postman, VS Code, npm/yarn

Methodologies: Agile/Scrum, Component-Based Architecture, MVC, Microservices, Code Review, API Integration

PROFESSIONAL EXPERIENCE

Senior Software Developer

Tech Crusades | September 2025 – Present | Full-Time | techcrusades.com

- Lead development of the HighGear Platform — a dual-application enterprise analytics SaaS — using Next.js, TypeScript, and Supabase, contributing to architectural decisions and end-to-end feature delivery.
- Designed and built interactive analytics dashboards and KPI reporting modules with Recharts, enabling business stakeholders to monitor real-time metrics and generate structured reports.
- Implemented enterprise-grade RBAC across the HighGear App and Admin Portal, enforcing tiered permission hierarchies and securing user management and admin operations.
- Integrated OpenAI APIs to power AI-driven insights and intelligent data summaries within analytics workflows, augmenting platform intelligence and user decision-making.
- Engineered high-performance data table interfaces using TanStack Table with multi-column filtering, sorting, and pagination to manage large enterprise datasets efficiently.
- Leveraged Next.js Server Actions to streamline server-side data operations, reducing client-server overhead and improving overall platform responsiveness.

Associate Software Developer

OptimaGeeks | April 2025 – September 2025 | Full-Time | optimageeks.com

- Contributed to the frontend development of Kalpa AI, building complex role-based dashboards and multi-step user workflows using Next.js, React, and TypeScript.
- Developed interactive data visualization components with Recharts and shadcn/ui, translating complex analytical data into clear, responsive chart interfaces.
- Managed application-wide state using Redux Toolkit, enabling predictable, scalable data flow across complex multi-step user journeys.
- Implemented AWS Amplify (Cognito) authentication flows — sign-up, sign-in, MFA, and session management — ensuring secure role-based access across user personas.
- Delivered the Therapist Assessment platform using the MERN stack, building Admin, Participant, and Rater modules with RBAC and an Excel export system via ExcelJS.

Software Developer

Zysoftech | December 2024 – March 2025 | Contract-Based Remote | zysoftec.com

- Delivered key features for the Halal Table restaurant booking platform, building real-time booking workflows and instant vendor notification systems using NestJS and React.js.

- Developed customer-facing modules including restaurant search, profile management, review systems, and menu interfaces, improving platform discoverability and user engagement.
- Integrated secure payment gateway solutions and implemented TypeORM data models on PostgreSQL, enabling scalable multi-vendor database operations.
- Collaborated remotely within an Agile team, consistently meeting sprint commitments and maintaining code quality through regular peer reviews.

Software Developer

Mercury Sols | July 2023 – December 2024 | Full-Time | mercurysols.org

- Built and maintained full-stack web applications for multiple clients using the MERN stack, delivering consistent performance and quality user experiences across engagements.
- Developed and integrated RESTful APIs and third-party services, enabling reliable data exchange between React.js frontends and Node.js/Express.js backends.
- Implemented JWT-based authentication, role-based authorization, and session management, securing access across all application modules.
- Designed reusable, responsive React.js component libraries following DRY principles, accelerating feature development velocity across client projects.
- Participated in Agile sprints with designers and project managers, consistently delivering sprint commitments and meeting client expectations on time.

KEY PROJECTS

HighGear Platform (HighGear App + Admin Portal) — Enterprise Analytics SaaS

Next.js | TypeScript | PostgreSQL (Supabase) | OpenAI | Tailwind CSS | Recharts | TanStack Table | Server Actions

- Built a dual-application SaaS platform (user-facing analytics app + admin portal) sharing a unified Supabase PostgreSQL backend with consistent authentication architecture.
- Delivered analytics dashboards and KPI reporting modules using Recharts, providing real-time data visualization and business intelligence for both users and admins.
- Implemented platform-wide RBAC with tiered permission structures, securing admin operations and granular user access management across both applications.
- Integrated OpenAI APIs to generate AI-powered data insights and contextual summaries, enhancing platform intelligence within analytics workflows.
- Built enterprise-grade data tables with TanStack Table supporting multi-column filtering, sorting, and pagination for efficient large dataset management.

Kalpa AI — AI-Powered SaaS Platform

Next.js | React | TypeScript | Redux Toolkit | AWS Amplify (Cognito) | Tailwind CSS | shadcn/ui | Recharts

- Built a responsive, role-based dashboard for a data-intensive AI SaaS platform, designing distinct interfaces and tailored workflows for multiple user personas.
- Developed interactive data visualization components with Recharts, translating complex AI-generated analytics into clear, accessible chart layouts with responsive design.
- Managed global application state using Redux Toolkit, ensuring scalable and predictable data flow across complex, multi-step user journeys.
- Integrated AWS Amplify (Cognito) for sign-up, sign-in, MFA, and session management, securing role-based access across all user types.

Therapist Assessment System — Role-Based Clinical Evaluation Platform

React.js | Node.js | Express.js | MongoDB | Redux | ExcelJS

- Designed a multi-role evaluation platform (Admin / Participant / Rater) for structured clinical therapist performance assessment with granular RBAC enforcement.
- Built video assignment workflows enabling supervisors to upload sessions, assign evaluations, and collect structured feedback using predefined rating rubrics.
- Developed an Excel reporting module using ExcelJS, generating formatted multi-sheet exports for clinical administrators to download consolidated evaluation data.

Halal Table — Multi-Vendor Restaurant Booking & Discovery Platform

NextJS | React.js | PostgreSQL | TypeORM | Redux | Payment Gateway

- Developed a full-stack restaurant discovery and booking platform with multi-vendor management, restaurant profiles, review systems, menus, and social media integration.

- Implemented a real-time booking confirmation system with instant vendor notifications, reducing confirmation delays and improving the booking experience.
- Architected scalable NestJS services with TypeORM on PostgreSQL, handling concurrent multi-vendor operations with optimized query execution.
- Integrated secure payment gateways enabling reliable in-app transactions and a streamlined checkout experience for customers.

EDUCATION

Bachelor of Science in Computer Science

Khawaja Fareed University of Engineering and Information Technology | 2019 – 2023

CERTIFICATIONS & CONTINUOUS LEARNING

- Actively upskilling in AWS Cloud Fundamentals and Docker for cloud-native deployment with learning new technologies.
